.things that Matter

Product Requirements Document

Company Name	.things that Matter
Document Type	Product Requirements Document
Version	1.0
Date	January 21, 2026

1. Product Vision

Vision Statement: Make commerce portable, viral, and universally accessible - for humans today, AI agents tomorrow, and a decentralized economy in the future.

1.1 Strategic Phases

Phase	Codename	Focus	Moat
Phase 1	Viral Commerce	Create .thing files, establish virality	Accessibility
Phase 2	Agentic Commerce	AI energy efficiency	Energy Efficiency
Phase 3	Decentralized Commerce	Blockchain infrastructure	Decentralization

2. Phase 1: Viral Commerce (2026)

Goal: Prove that products can travel virally across the internet

Budget: R72,000 | **Success Metric:** 10,000 .thing files, 100+ extension users

2.1 Functional Requirements

ID	Requirement	Priority
P1-F01	.thing File Format (FlatBuffers)	Must Have
P1-F02	Commerce Compiler	Must Have
P1-F03	CLIP Vectorization (512-dim)	Must Have
P1-F04	Ed25519 Signing	Must Have
P1-F05	Zstd Compression	Must Have
P1-F06	Polyglot Images (Steganography)	Must Have
P1-F07	XMP Metadata Beacon	Must Have
P1-F08	matter:// URI Protocol	Must Have
P1-F09	Shadow Index API	Must Have
P1-F10	Browser Extension (Lens)	Must Have

P1-F11	Cloudflare R2 CDN	Must Have
P1-F12	Batch Compilation	Should Have
P1-F13	Merchant Dashboard	Could Have

2.2 Non-Functional Requirements

ID	Requirement	Target
P1-NF01	Compile Latency	<500ms
P1-NF02	File Size	<50KB average
P1-NF03	Extension Load	<100ms
P1-NF04	Signature Verify	<10ms
P1-NF05	CDN Availability	99.9%
P1-NF06	Steganography Survival	≥50% platforms

3. Phase 2: Agentic Commerce (2027)

Goal: Make .thing the most efficient format for AI agent commerce

Moat: Energy Efficiency - cheaper for AI to use than any alternative

3.1 Efficiency Gains

Operation	Traditional	Matter (.thing)	Improvement
Parse product	~500ms, O(n)	~5ms, O(1)	100x faster
Read price field	Parse entire response	Direct byte offset	Zero allocation
Semantic search	External API call	Local vector math	No API cost
Token consumption	~2000 tokens/product	~50 tokens/product	40x cheaper

4. Phase 3: Decentralized Commerce (2028+)

Goal: Open-source the protocol and decentralize the infrastructure

Moat: Decentralization - no single point of control

4.1 Key Components

- Blockchain-based product registry
- IPFS/Filecoin decentralized storage
- Smart contract checkout
- Multi-signer support
- Community governance
- Open-source everything (MIT/Apache)

5. Success Metrics

Metric	Phase 1 Target	Phase 2 Target	Phase 3 Target
.thing files created	10,000	100,000	1,000,000+
Extension users	100+	10,000+	100,000+
Merchants	5-10	100+	1,000+
Agent transactions	-	100K+	1M+
Independent nodes	-	-	1,000+

6. Document Approval

Role	Name	Signature	Date
CEO	Sobuhle Nyambali	_____	___/___/2026

CTO	Matome Mboweni	_____	___/___/2026
